

Health and Safety

Risk Assessment

1 Day

Risk assessment is the starting point for effective health and safety risk control programmes for all employers seeking to identify risks and reduce injury or loss potential.

The law requires all employers to conduct adequate and appropriate risk assessments of all work activities and introduce measures to minimise or control those risks. For many employers it is seen as an opportunity to evaluate business risks, eliminate or reduce risks where possible and more importantly seek to reduce losses and insurance costs.

Designed for

All employees having specific responsibilities for other staff or work activities, ideally supervisors, team leaders or managers would benefit from the training.

Objectives

Delegates completing the course will:

- Understand the concept of Hazard, Risk and Accident.
- Understand the process and stages of effective Risk Assessments.
- Be able to conduct suitable risk assessments and make judgements on risk control measures.
- Be able to rank risks and set priorities.

Course Content

What is an Accident?

Accident causation theory

The value of near miss investigation - how to learn from accidents

The use of statistics in the process of risk assessment
